Subject: Limited Competition: Pew Scholars Program in the Biomedical Sciences

Date: May 12, 2017

The Pew Scholars Program in the Biomedical Sciences provides funding to young investigators of outstanding promise in science relevant to the advancement of human health. The program makes grants to selected academic institutions to support the independent research of outstanding individuals who are in their first few years of their appointment at the assistant professor level. The Program is open to individuals with a doctorate in biomedical science, medicine or a related field. As of October 23, 2017, nominees must hold full-time appointments at the rank of assistant professor at one of the invited sponsoring institutions. On July 7, 2017, candidates must have been in such an appointment for less than three years (not appointed before July 7, 2014), whether or not such an appointment was on a tenure track. Time spent in clinical internships, residencies, or in work toward board certification does not count as part of this three-year limit. Candidates whose work is based on biomedical principles, but brings in concepts and theories from more diverse fields, are encouraged to apply. Risk-taking is encouraged.

An award of \$60,000 per year will be provided to the sponsoring institution for use by the Scholar over the four-year period, subject to annual review of the Scholar's progress. Grant agreements will be issued in August of the award year. The awarded funds may be used, at the discretion of the Pew Scholar, for personnel, equipment, supplies, or travel directly related to the Scholar's research and as to best advance their research and career. Not more than \$10,000 of the annual award may be used for the Scholar's salary (including benefits). Not more than 8% of the total award may be allocated for overhead costs. It is expected that Pew Scholars will spend at least 80% of their time in work related to the accomplishment of their overall research goals. More details can be found at <http://www.pewtrusts.org/en/projects/pew-biomedical-scholars/program-details>. UNM must provide the name of the selected nominee to the Pew Charitable Trusts by July 7, 2017. The selected nominee's full application will be due to the agency on October 23, 2017.

**This is a limited competition; each institution is limited to one nomination. Please submit your 3-page preproposal plus, curriculum vitae, and a letter of support from the chair of your department (all documents in a SINGLE PDF file, 11 point font) by 5pm on Wednesday, May 31, 2017 to [limited@unm.edu](mailto:limited@unm.edu) with the subject line indicating: PEW - your name.** No late submissions will be considered. In the preproposal, briefly describe your most significant research contribution to date. Highlight the most innovative and novel aspects of

your proposed research. Describe a risky or creative approach you might use in pursuit of your goals. Describe how you would benefit from the receipt of a Pew scholarship. In addition, reflect on why your particular research is personally significant. Include a statement of the project to be undertaken, its aims and objectives, the methods to be used and the potential significance of the research. Include a description of how this project fits in your “big picture” plans.

The narrative should be accompanied by a curriculum vitae, and a letter of support from the chair of your department. Selection of the successful candidates will be based on the detailed description of the work that the applicant proposes to undertake, evaluations of the candidate’s performance, and notable past accomplishments, including honors, awards and publications. In evaluating the candidates, considerable weight is given to evidence that the candidate is a successful independent investigator and has published significant work.
